

We're Yoop, a tech company that is founded with a mission to change the traditional way of online shopping by offering pioneering services and high class shopping experience. That means building and consuming API's, dealing with high-throughput and large datasets and doing smart processing for all of it. And we, of course, also have to offer a smooth mobile and a reliable web application for our clients.

Development of the product will kick off and continue over the years to come and your role in Yoop will be decisive. We want to make smart use of technology and to keep up with the latest technologies but also be able to move fast. We care about quality and doing things the right way from the beginning.

Job Description

We are looking to hire a PHP Developer to join our back-end development team. In this role, you will participate in the entire application lifecycle, focusing on writing effective and scalable code.
