

About the job

CENSUS is an internationally acclaimed Cybersecurity services provider. We support the needs of multiple industries, providing IT and OT security assessment services to public and private organizations around the world, including international financial institutions and Fortune 500 companies. Powered by cutting edge research, scientific analysis and real-world engineering, CENSUS delivers unparalleled security assessment & consulting services for software, devices, infrastructure and organizations. Learn more about CENSUS at census-labs.com.

CENSUS is seeking for a talented **Senior Cybersecurity Training Consultant** to join our Athens-based engineering team. The position refers to the Head of Engineering.

The successful candidate will work along our Technical Project Managers, security engineers and Management team to effectively deliver cybersecurity trainings to CENSUS staff and clients.

Responsibilities

- Design and deliver on a timely manner Training Courses, with focus in Secure Development and Information Security topics
- Organize training delivery so that it enables staff up-skilling and high customer satisfaction
- Update Training schedules and material, taking feedback from CENSUS engineers and clients
- Organize, run and be the point of contact for the CENSUS onboarding education & lifelong learning program

Qualifications

- Background in Information Security (working experience or related university diploma)
- Three years teaching experience of any type (lab assistant, seminar instructor, internal / corporate trainer, university course tutor etc.)
- Three years experience in preparing educational material
- Excellent presentation & communication skills
- Proficient in English
- Ability to travel (for short periods of time)

CENSUS provides:

- A **collaborative** work environment: you will be working among exceptional engineers, highly experienced in the field of Cybersecurity, that value teamwork and knowledge sharing.
- An **efficient** work environment: you will be provided with access to the necessary technology, training and resources in order to achieve your goals. CENSUS delivery processes will make sure that the output of your work is of high quality and presented in the best possible manner.
- An environment for **personal development**: instead of sticking to a project or a role, we purposefully make sure that you gain experience by working on different projects and grow by practicing different roles.
- A **creative** work environment: our engineers propose solutions to some of the most challenging technological problems, contribute to many of the company's processes and tools, and perform leading IT Security Research with results published on major conferences and publications.
- An **enjoyable** work environment: beyond the competitive salary and benefits, we maintain a friendly and enjoyable work environment for everyone, covering work at the office, remote work and onsite work at the customer's premises.
