

1. Briefly about FASMETRICS S.A.

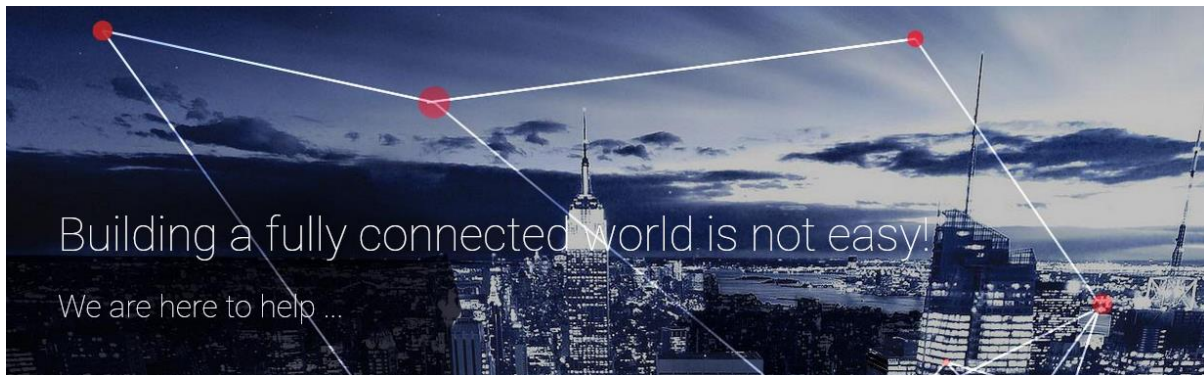

FASMETRICS S.A. was established in 2005 and now operates in five countries, an impetus that will lead the company's future for many years to come. We create engineering products and offer radio optimization services that satisfy the accelerating needs of the telecommunication industry. The products and services we offer provide a unique opportunity for mobile operators and equipment vendors working with mobile communication networks, to have access to an environment where they can manage, analyze, and make better decisions.

At FASMETRICS, we are vendor independent experts.

We provide solutions at all stages of mobile communication network deployment; from the initial planning stage (where testing, measurement and validation are critical), through to installation, operation and maintenance for legacy as well as future network upgrades.

We are committed to innovation and fast-forward-thinking.

Our main objective is to provide outstanding services and highly specialized technology to achieve cost-effective operational excellence for our customers in the Telecoms Industry. Our products and services have proved the tangible, measured, value they bring to our customers.

We are highly spirited and innovative in thinking.

Our team consists of professionals that are the top of their field, committed in offering solutions that can be applied to all wireless networks and operating technologies. We have proven expertise in any radio access technology, from WiMAX and GSM-R to WCDMA and LTE-Advance.

We are focusing research on successful product development.

We create proprietary technology that can ensure competitiveness in the global market and produce concrete commercial and financial results for the industry. We own over 20 globally recognized patents and patent applications in the field of broadband radio optimization.
